(54) Title: COLOR MATCHED AUTOMOTIVE TRIM AND BODY PART

**(57) Abstract:** An automotive trim part (18) comprising a pigmented transparent layer (32) overlying an intermediate bright film layer (30). The intermediate bright film layer (30) overlies a thermoplastic olefin layer (26). The thermoplastic olefin layer (26) is mounted to an automobile (20). The combination of the intermediate bright film layer (30) with the pigmented transparent layer (32) provides unique gloss and color qualities to automotive trim parts (18) such that the color of the automobile (20) may be matched by the automotive trim part (18) while providing a glossy sheen comparable to the gloss of chrome, for example. As a result, the visual attractiveness of automobiles (20) is enhanced and durable automotive trim parts (18) with no after-fabrication painting are provided.
